MONTHLY WEATHER MAP

June 1961

LIBRARY
AUG 23 1961
WEATHER BUREAU

General Summary of Weather Conditions

The drought which began in May 1961 in the grain areas of the Prairie Provinces continued into June, which for this region was the warmest, driest and sunniest on record. June mean temperatures were also above normal in British Columbia, the bulk of the Northwest Territories, the Maritime Provinces and Newfoundland. In Newfoundland warm dry weather brought many forest fires and people were being evacuated from a number of encircled communities at the end of the month. By contrast, Quebec and the southern and eastern parts of Ontario were cool and moist. The heaviest precipitation anywhere in the country was in the Peace River District of Alberta.

The province of British Columbia experienced cool, rainy weather from the end of the first week to halfway through the second week of June. There was another period of cool showery weather beginning on the north coast about the 20th and reaching the southern parts of the province by the 28th or 29th. Throughout the rest of the month a ridge of high pressure brought sunny, warm weather to the province. The period from the 12th to the 28th was almost uninterruptedly sunny in the southern part of the province. On the 17th 104° was recorded at both Ashcroft and Lytton and this was the highest temperatures achieved anywhere in Canada during June 1961. Also noteworthy was a new record of 329 hours of bright sunshine for the month set at Vancouver Airport.

June mean temperatures were above normal in most parts of British Columbia, anomalies ranging to five or six degrees in the southern interior valleys and averaging about two degrees on the Fraser Delta and Vancouver Island. In the central and northern parts of the province there were generally temperature excesses of two to four degrees but a few stations in the northwestern corner experienced negative anomalies of one or two degrees.

June precipitation was only about half the normal amount in the Fraser valley and on the delta, and on Vancouver Island, except for a few stations along the west coast of the island which experienced excesses. In the southern interior valleys excesses and deficiencies were equally frequent. In the central and northern interior of the province excesses were somewhat more frequent than deficiencies especially in the northeastern corner where there were excesses ranging to sixty per cent.

June was warm, dry and sunny throughout the grain areas of the Prairie Provinces. Calgary, Edmonton and Regina each reported new record high mean temperatures for the month while at Winnipeg the mean temperature for the month was only two tenths of a degree lower than the record for the month set in 1956. New records were also set at Regina, Edmonton and Winnipeg for total number of hours with bright sunshine. The highest temperatures recorded in the Prairie Provinces during the month were 101 at Cameo, Saskatchewan on the 6th and 102 at Deloraine, Manitoba on the 28th. Mean temperatures for the month were seven to nine degrees above normal in southern Alberta, five to eight degrees above normal in Saskatchewan and four to six degrees above normal in Manitoba and in the Peace River District.

For the second month in a row precipitation was very light throughout most of the prairie grain areas resulting in serious drought conditions. Southern Manitoba reported less precipitation than in any other June on record. In the part of Alberta south of Edmonton and throughout Manitoba and Saskatchewan most stations reported less than one inch of precipitation as the total for the month, with deficiencies ranging from fifty to ninety per cent. In the section of Alberta from Edmonton north, and including the Peace River District, precipitation was heavy with a number of stations getting over twice the normal fall. The greatest June precipitation total anywhere in Canada was recorded from House Mountain Tower, a forestry station in northern Alberta, where 10.87 inches was reported. In the same general area, Wagner experienced a fall of 9.07 inches, and this was the second highest total reported in Canada for June 1961.

June was a cloudy and cool month in most sections of Ontario. Only on the 30th of the month did temperatures reach the nineties, when Windsor reported 93°F, the highest temperature in the province during the month. Mean temperatures for June were normal to two degrees below normal in southwestern Ontario, and two to four degrees below normal in the central and southeastern sections of the province. In contrast to the rest of the province, the western districts of Patricia, Rainy River and Kenora reported temperature excesses of one or two degrees.

Several low pressure areas passed over the central regions of the province of Ontario during the month of June bringing copious precipitation with falls of over an inch being reported at a number of places from thunderstorms on various dates during the month. The highest total for the month, and indeed for eastern Canada was reported from Sudbury, which experienced a fall of 7.42 inches, almost four times the normal amount. Generally there were excesses ranging to forty per cent in southern Ontario with scattered stations reporting deficiencies and a few stations with over twice the normal amount. In the eastern districts of northern Ontario the range was from deficiencies of twenty per cent to excesses of eighty per cent. In the western districts there were large deficiencies, particularly in the southwest corner where Fort Frances reported only four per cent normal fall. A combination of high temperatures and very light precipitation in this part of the province aggravated the forest fire situation, already serious at the beginning of the month because of light precipitation during May.

June was cool and moist in the province of Quebec. It was the fourth consecutive month with below normal mean temperatures in the southern part of the province. Mean temperatures were four or five degrees below normal in the Ottawa valley, and one to three degrees below normal in the remainder of the province, except for stations in the Gulf of St. Lawrence area which experienced positive temperature anomalies of one to three degrees.

The month's precipitation came mostly from thunder showers of which six were reported at Montreal. On the 21st a thunderstorm yielded 1.96 inches of rain at Montreal Airport and some flood damage was reported from the city. Because of the thundery nature of precipitation the distribution was irregular, and in the Eastern Townships and along the St. Lawrence River the range was from deficiencies of fifty per cent to excesses of forty per cent, although excesses were more frequent. In the valleys of the Ottawa, Gatineau and St. Maurice rivers there were generally deficiencies ranging to fifty per cent while in the Lake St. John area there were excesses averaging about thirty per cent. In the central and northern sections of the province of Quebec most stations experienced small excesses.

In the Maritime Provinces the backward conditions of the late spring were largely overcome and the frequency of storms was much less in June than it had been in previous months. Virtually no tropical air penetrated the Maritimes but bright sunshine helped to warm what were basically cold air masses. The first hot days occurred on the 12th and 13th when many readings in the 80's were recorded. Other warm spells were from the 17th to the 21st and during the last week of the month. Mean temperatures for the month ranged from normal to two degrees above normal, with the higher anomalies on Cape Breton Island, Prince Edward Island and along the New Brunswick northshore.

Althqugh the month was generally free from major storms cold front passages were frequent, generally accompanied by showers. Most stations in the Maritime Provinces experienced somewhat above normal precipitation for the month. Parrsboro reported 6.80 inches of rain which was twice the normal and the greatest fall anywhere in the region. In contrast to the general pattern were deficiencies of twenty to forty per cent in the northern half of New Brunswick, and of twenty to sixty per cent along the Atlantic coast of Nova Scotia.

On the Island of Newfoundland, June was dry, sunny and warm. Both Gander and St. John's Airport reported much above normal sunshine, the total of 269 hours at St. John's being the highest on record. There were a few cool days scattered throughout the month but mean temperatures ranged from one or two degrees above normal along the south coast to three to six degrees above normal in the interior and northern parts of the island. The mean temperature at St. John's Airport was five degrees above normal and the highest in 20 years of record.

Precipitation during June in Newfoundland was light and showery. This combined with the warm sunny weather to create a serious drought problem as wells went dry. A few stations reported precipitation excesses, notably Burgeo and Daniel's Harbour, but most Newfoundland stations experienced precipitation deficiencies of about thirty per cent while in the St. John's region there were deficiencies of sixty per cent. At the end of the month people were being evacuated from several communities as large forest fires encircled them and cut off escape by road.

Along the Labrador coast, June mean temperatures were two to three degrees above normal, except at Hopedale where there was a two degree deficiency. Precipitation was forty to fifty per cent below normal at Cartwright and Belle Isle but other Labrador stations experienced excesses of twenty to thirty per cent. Again Hopedale was exceptional with over twice the normal rainfall for the month.

June was cool at most stations of the Yukon Territory particularly in the southern section where mean temperatures for the month were two or three degrees below normal. June precipitation was two and a half times normal at Whitehorse, while other stations in the Yukon Territory experienced excesses ranging to eighty per cent.

The mainland parts of the Northwest Territories and the western part of the Arctic Archipelago experienced above normal temperatures in June. Temperatures of 80 degrees were reported as far north as Inuvik, while Fort Smith reported a high of 91 degrees. The greatest anomalies were six or seven degrees on the shores of Great Slave Lake and the northern part of the Mackenzie River Valley. There were smaller anomalies in the District of Mackenzie, while in Keewatin mean temperatures were two to four degrees above normal. On the Arctic Archipelago, June mean temperatures averaged one to five degrees above normal in the western half and two to five degrees below normal in the eastern half.

June precipitation was over fifty per cent above normal along the Mackenzie River below Fort Norman but elsewhere in the Districts of Mackenzie and Keewatin there were precipitation deficiencies of twenty to eighty per cent. Precipitation was generally heavy on the Arctic Archipelago with Frobisher Bay reporting 2.50 inches, which was almost two and a half times normal. Elsewhere on the Arctic islands there were deficiencies ranging to seventy per cent.

JUNE 1961

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
